PERSONAL STATEMENT

I'm a product-minded engineer obsessed with making AI do real engineering work. For the past 18 months, I've built an agentic web search engine from scratch at OneDeal (before MCP or AI web search existed), co-founded OrAI where I own everything from code to compliance to investor strategy, contributed to open source AI tooling, shipped multi-agent systems across every project, and most recently joined Kilo where I'm building and maintaining KiloClaw and directly supporting our customers.

PROFESSIONAL EXPERIENCE

Software Engineer (Customer Engineering)

03/2026 – Present

Kilo

- Build, maintain, and support KiloClaw — Kilo's managed OpenClaw platform — across the full stack, partnering directly with customers to evaluate, integrate, and succeed with the product.
- Investigate production incidents end-to-end: blast radius analysis, root cause, and remediation across customer environments.
- Iteratively improve Kilo's automated support processes and admin tooling to reduce manual toil and accelerate time-to-resolution on high-priority issues.

Technical Cofounder

08/2025 – Present

OrAI

- Co-founded an early childhood education SaaS company. Own the full product and business: architecture, implementation, legal (ToS, privacy policy, pilot contracts), compliance alignment, mentor network development, and angel investor identification. Built with TypeScript, React, Tailwind CSS, shadcn/ui, Supabase, and OpenAI API.
- Expanding platform from AI-powered assistant into document management, policy collision resolution across state childcare regulations, and automated compliance scheduling.
- Sole technical decision-maker: handle product roadmap, user research, analytics (PostHog), competitive analysis, and go-to-market strategy alongside all engineering work.

Open Source Contributor

01/2026 – Present

Beads (Agent Memory Framework)

- Core contributor to Beads, a structured memory and context management framework for AI coding agents that applies engineering task decomposition (epics, stories, tasks, dependencies) to agent memory — solving the cross-session persistence gap in agentic development.
- Integrated Dolt (Git-for-data SQL database) CLI tooling and shipped critical bug fixes to unblock the Gastown agent framework after its storage layer migration.

Personal Project

08/2025 – Present

Trade Intel

- Built an email extraction pipeline that converts long-form financial newsletters into structured data (securities, sentiment, recommendations). After hitting context window limits with a single-agent approach, organically discovered multi-agent decomposition as the solution — splitting work across specialized agents (split, verify, classify, extract, union) to eliminate needle-in-a-haystack failures. Built with C# Lambda, React, AWS, DynamoDB, and n8n orchestration.

Founding Engineer

10/2024 – 10/2025

OneDeal (Techstars '23)

- Built agentic scouts from scratch that autonomously source off-market businesses matching investor criteria — ~80 sourced/hour vs. 4/week manually. Designed and shipped the full agentic pipeline months before MCP or AI web search existed. Tech: TypeScript, SERP API, OpenAI API, Bright Data, Playwright, DynamoDB, Docker, ECS.
- Shipped a production web platform for PE firms and SMB investors using React.js, TypeScript, and DynamoDB.

Software Engineer I → II

08/2021 – 03/2026

Alarm.com | Centennial, CO

- Built an LLM-powered, self-validating refactoring tool (Sept 2023) that modernizes legacy database code and autonomously generates sanity tests to verify its own output — increasing maintenance productivity ~8x. One of the earliest AI adopters at the company. Built with C#, .NET 8, VSIX, GPT-4o.
- Built Handoff Bot, a GitHub App (later ported to a Claude skill) that reviews PR changes and generates structured documentation for Quality Engineers: high-level summary, testing guidance, and risk assessment — streamlining the formal ticket handoff process.
- Led engineering for Stripe Customer-Managed Subscriptions: resource planning, spec refinement, design, implementation, and cross-team coordination. C#/.NET Core, SQL, Ember.js, TypeScript.
- Shipped internal DevEx tooling (Chrome extensions, 2FA microservice, gamification). Filed a provisional patent in IoT/smart-security.

SKILLS

Languages & Frameworks — TypeScript, Node.js, React, Tailwind CSS, shadcn/ui, C#/.NET, Python

AI & Agents — OpenAI API, Amazon Bedrock, Cursor, multi-agent pipelines, prompt engineering, n8n, KiloClaw, OpenClaw

Cloud & Infra — AWS (ECS, Lambda, DynamoDB), Supabase, Cloudflare Workers, Azure, Terraform, Docker

Data — PostgreSQL, DynamoDB, SQL Server, Dolt

Product — Customer discovery, user research, analytics (PostHog), go-to-market, compliance

Leadership — Cross-team coordination, mentorship, technical writing, open source contribution, customer engineering, incident response

EDUCATION

B.S. in Computer Science, Minor in Mathematics

05/2021

University of Miami | Coral Gables, FL | GPA 3.96
